

STEP Exercises - Geometry (2 pages; 30/9/18)

(1) ABC is a triangle circumscribed by a circle of radius R, as shown in the diagram below.

Show that (i) $\frac{a}{\sin A} = 2R$ (ii) the area of the triangle is $\frac{abc}{4R}$

(2) Find the equation of the circle passing through the points A (2,8) , B (7,3) and D (5,7)

(3) Angle Bisector Theorem

Referring to the diagram below, the Angle Bisector theorem says that

$$\frac{BD}{DC} = \frac{AB}{AC}$$

Prove the Angle Bisector Theorem.

(4) Find the shortest and longest distances from the point $(3,4)$ to the circle $x^2 + y^2 = 144$ (justifying any assumptions you make).
