STEP/Trigonometry Q2 (30/6/23)

What is the period of $2 \sin \left(3 x+\frac{\pi}{4}\right)+3 \cos \left(\frac{2 x}{3}-\frac{\pi}{3}\right)$ ?

## Solution

The period $T_{1}$ of $2 \sin \left(3 x+\frac{\pi}{4}\right)$ satisfies $3 T_{1}=2 \pi$
[as $\left.2 \sin \left(3[0]+\frac{\pi}{4}\right)=2 \sin \left(2 \pi+\frac{\pi}{4}\right)\right] ;$ ie $T_{1}=\frac{2 \pi}{3}$
Similarly for $3 \cos \left(\frac{2 x}{3}-\frac{\pi}{3}\right), \frac{2 T_{2}}{3}=2 \pi$, so that $T_{2}=3 \pi$
The period of the sum of these functions is the LCM of these two periods; ie $6 \pi$.
