

Circular Motion – Q2 [7 marks] (2/6/21)

Exam Boards

OCR : Mechanics (Year 1)

MEI: Mechanics b

AQA: -

Edx: Mechanics 2 (Year 1)

A bike is being ridden round a circular track of radius 50m, banked at 30° . If the coefficient of friction is 0.3, what is the slowest speed possible? [7 marks]

A bike is being ridden round a circular track of radius 50m, banked at 30° . If the coefficient of friction is 0.3, what is the slowest speed possible? [7 marks]

Solution

Vertical equilibrium \Rightarrow

$$R\cos 30^\circ + 0.3R\sin 30^\circ = mg \quad (1) \quad [2 \text{ marks}]$$

$$\text{Circular motion} \Rightarrow R\sin 30^\circ - 0.3R\cos 30^\circ = \frac{mv^2}{50} \quad (2) \quad [2 \text{ marks}]$$

$$(1)\&(2) \Rightarrow R = \frac{mg}{\cos 30^\circ + 0.3\sin 30^\circ} = \frac{mv^2}{50(\sin 30^\circ - 0.3\cos 30^\circ)} \quad [1 \text{ mark}]$$

$$\Rightarrow v^2 = \frac{9.8(50)(0.5 - 0.3\left(\frac{\sqrt{3}}{2}\right))}{\frac{\sqrt{3}}{2} + 0.3(0.5)} = \frac{117.694}{1.01603} = 115.837$$

$$\Rightarrow v = 10.762 = 10.8 \text{ ms}^{-1} \quad (3\text{sf}) \quad [2 \text{ marks}]$$
